OUR VISION

Uzman Cerrahi Aletler aspires to become a globally recognized healthcare solutions partner by offering a wide range of products, from top-tier surgical instruments to sterilization containers. With a customer-centric approach, we continuously foster growth by combining innovation and quality, maintaining an international export presence. Our vision is to enhance the well-being of people worldwide by providing high-quality and unique products to the healthcare sector, shaping a better future.

OUR MISION

At Uzman Cerrahi Aletler, we have been continuously growing since 1996, reaching over 75 countries globally, by offering products such as surgical instruments and sterilization containers. We prioritize customer satisfaction, catering to special orders, and producing products that appeal to diverse audiences with our innovative approach. Among our core values are quality, reliability, and sustainability. Our mission is to support human health by providing healthcare professionals with access to the highest standards of surgical instruments and sterilization containers.

OEM SOLUTIONS

Cost-Efficiency: Although disposable products might seem economical, the need for frequent disposal makes them less cost-effective in the long run. Using sterilization containers proves to be more economical over time. Additionally, disposable wraps used in pouching can be damaged during sterilization or transport, compromising sterility and often requiring a repeat sterilization cycle. Aluminum sterilization containers help prevent these additional costs and save time by providing a more reliable and durable solution.

Eco-Friendly: Disposable products generate significant waste due to their paper and plastic content. By contrast, sterilization container systems reduce waste, helping to prevent the environmental pollution associated with disposable materials.

Portability: Equipped with stainless steel handles and optional high-temperature-resistant, antibacterial silicone covers, containers can be transported more easily and safely.

Identification: Barcodes, QR codes, or Data Matrix codes can be engraved on colored aluminum labels on both sides of the container for easy identification of instrument sets. Additionally, different lid color options allow for clear separation and identification of sets.

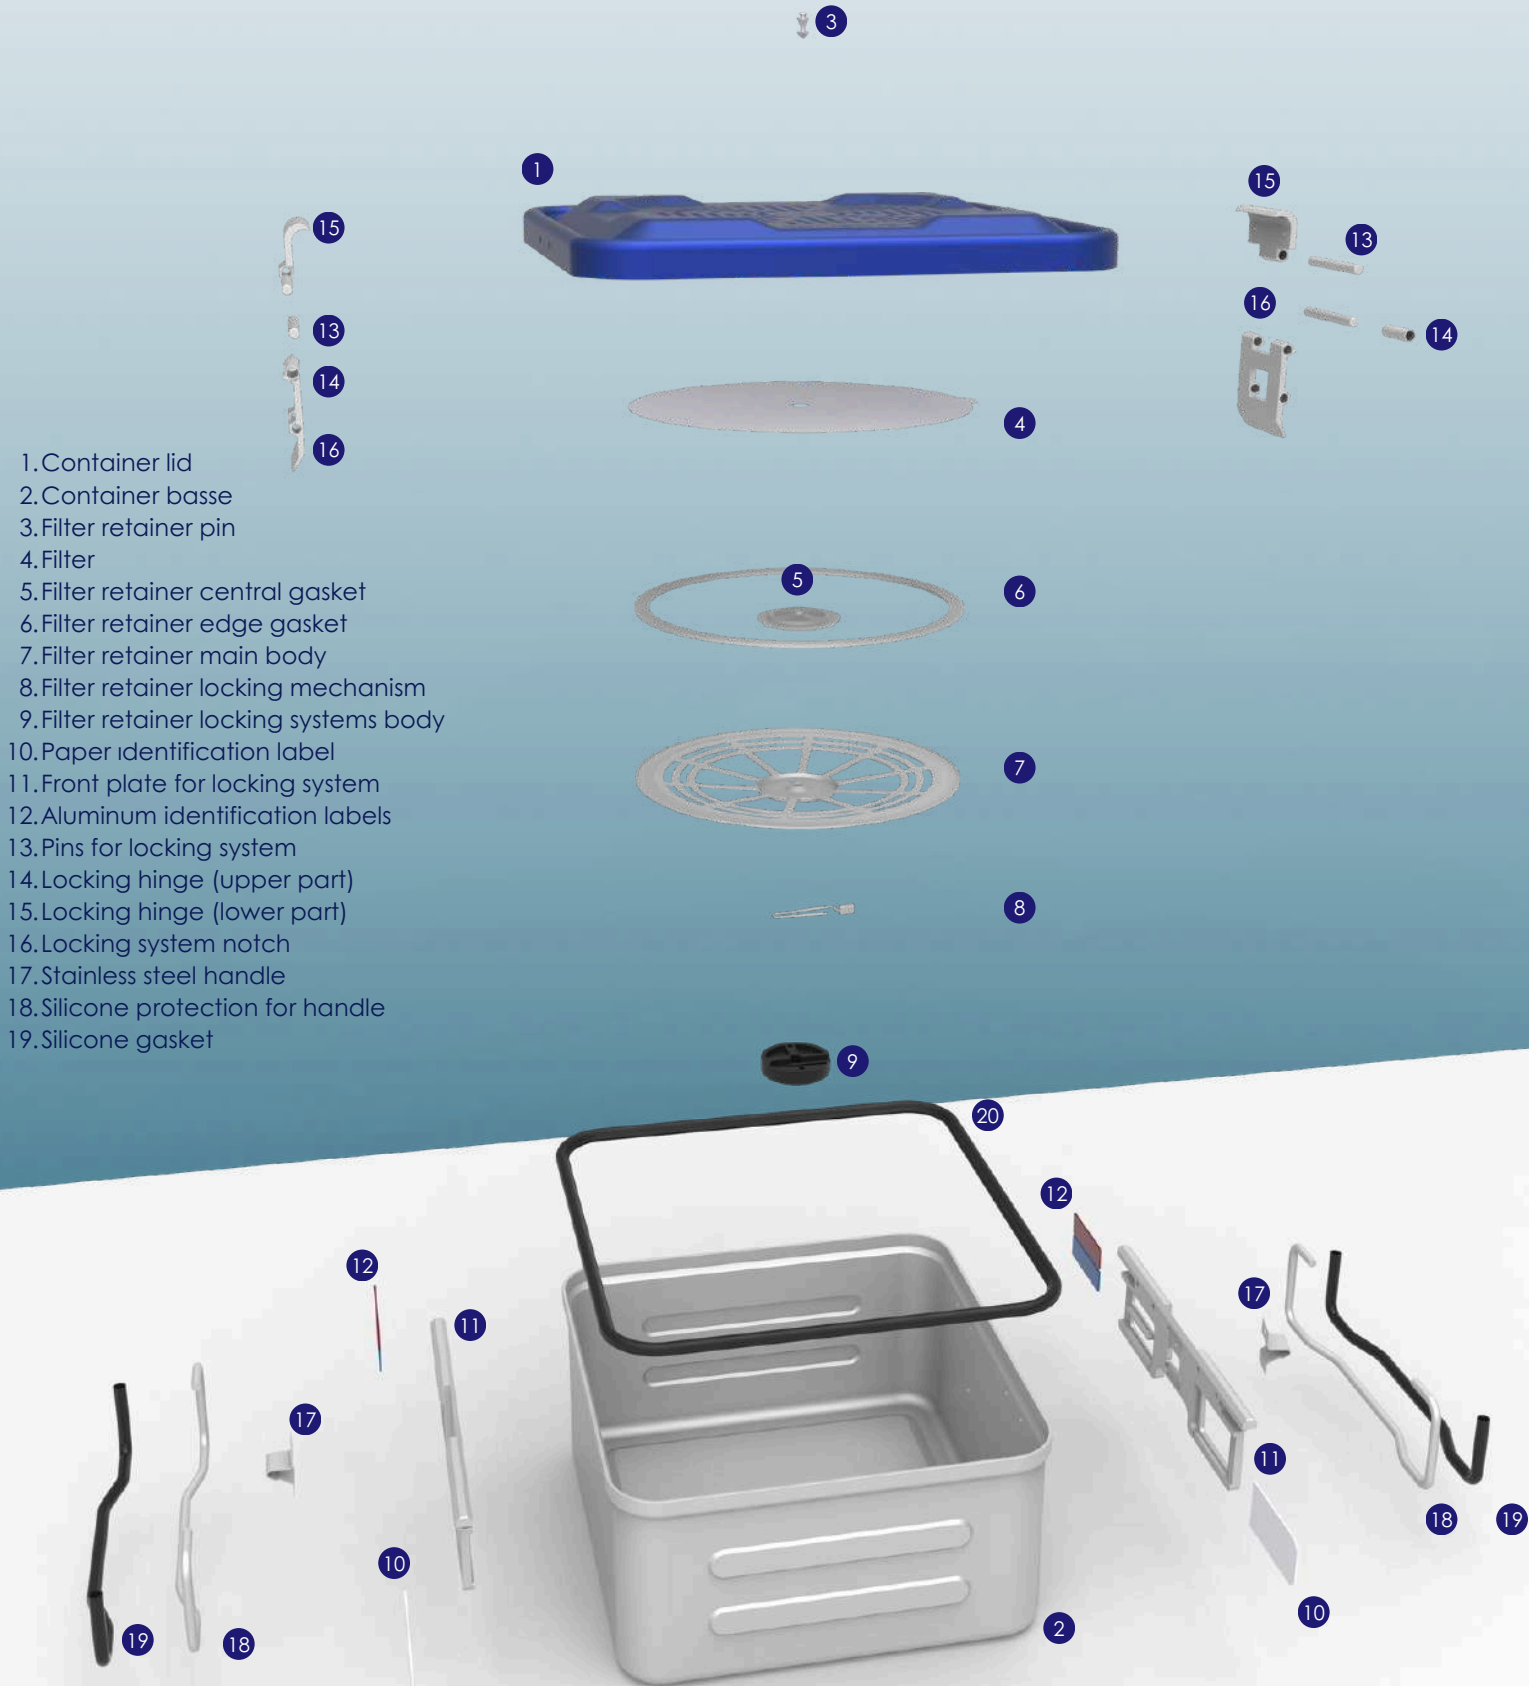

Safety: Sterilization with container systems offers greater safety than other methods. When stored properly and unopened, sterilization containers can maintain instrument sterility for up to six months.

THE ADVANTAGES OF USING STERILE CONTAINER SYSTEMS

Sterilization containers offer an efficient alternative to individually packaging surgical instruments with sterilization rolls or disposable wraps. This container-based sterilization method provides several advantages over these traditional approaches.

ASSEMBLY COMPONENTS

9 COLOR OPTIONS

STANDART MODEL STERILIZATION CONTAINERS

STANDART SERIES

1/2 HALF SIZE

- Bottom Perforated and Bottom Non-Perforated options are available for Standart Series of 1/2 Half Size.
- 9 Different colour options available.
- Single use paper filter, 100 cycles Textile filter and PTFE Filter options are available for Standart Seies.

**CLASSIC VALVE BIOBARRIER MODEL
STERILIZATION CONTAINERS**

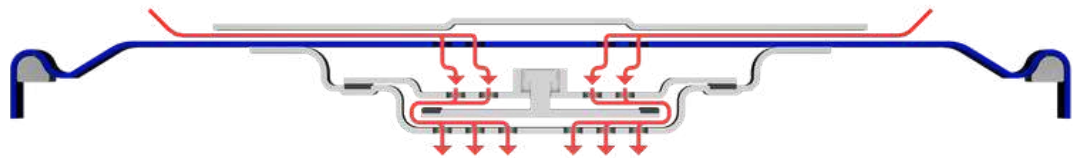

CLASSIC VALVE BIOBARRIER SERIES STERILIZATION CONTAINERS

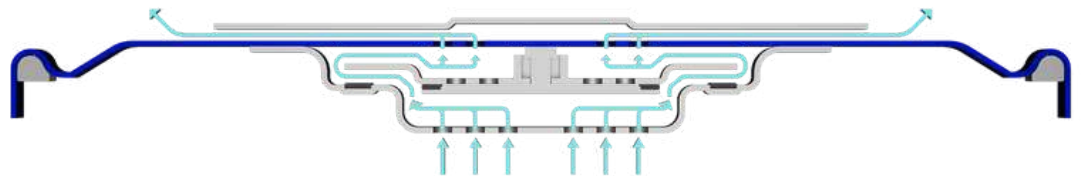

Valves are in the closed position before sterilization, as shown in the figure.

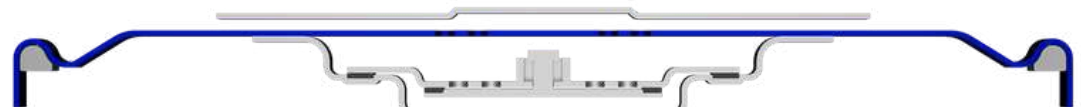

Valves are automatically opened by the steam pressure in the steam sterilizer and the sterilization cycle begins.

When the steam pressure in the steam sterilizer returns to normal, the valves are opened in the opposite direction and the container internal pressure and sterilizer pressure are equalized.

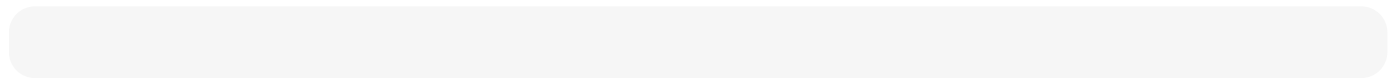

Valves become completely closed and air circulation is blocked after the sterilization cycle.

CLASSIC VALVE BIOBARRIER SERIES

1/2 HALF SIZE

- Valve Barrier series containers are working without filter.
- 9 Different colour options available.
